John Tristan R. Dolfo

Full-Stack Developer

Quezon City, Philippines | tristandolfo@gmail.com | +63 999 882 7004
tristandolfo.netlify.app | github.com/3StanTech

PROFILE

Full-stack developer building practical web applications with React, Next.js, TypeScript, and PostgreSQL. Experienced in translating workflows into responsive interfaces, data models, validation rules, and maintainable delivery paths. I focus on making software behavior understandable to the people who use and maintain it, and I am currently studying BS Information Technology with a specialization in Software Development.

EXPERIENCE

Freelance Software Developer | June 2026 - Present
Quezon City, Philippines

- Built web applications from requirements through deployment and maintenance, translating day-to-day workflows into usable interfaces, data models, and practical administrative tools.
- Created separate public demonstrations with sample data so project behavior can be inspected without exposing private records or production content.

IT Intern, Research and Standards Development Department | June 3 - July 16, 2026
Metropolitan Waterworks and Sewerage System - Corporate Office (MWSS) | Quezon City, PH

- Supported daily IT operations by assisting with operational systems, installing Wi-Fi access points, configuring basic networks, and troubleshooting hardware.
- Helped develop a document management system that turned a static spreadsheet into searchable records with structured categories and filters for staff.

SELECTED PROJECTS

Omni-Reviewer | Next.js, TypeScript, PostgreSQL

- Built an invite-only study app for a paying client that turns lecture files into cited study guides, quizzes and spaced-repetition flashcards; a verifier and term check cut unsourced claims from 10.4% to 2.7% on one lecture.
- Scoped every row to its owner, ran resumable AI generation jobs with leases on free models, and rehearsed Drizzle migrations on disposable Neon branches with CI on every push.

Café Order & CRM Dashboard | React, TypeScript, Supabase

- Centralized customized-order pricing in a TypeScript engine using integer centavos; validated imported drafts and tested rejection of supplied prices to keep order totals consistent.
- Built a browser-only demonstration of the order and CRM workflow so reviewers can inspect it without access to the cafe's customer database.

Fundsicles - Expense Tracker | React, TypeScript, Supabase/PostgreSQL

- Modeled money in integer centavos and separated transfers from spending; used database aggregate views for dashboard totals and tested money parsing and financial calculations.
- Defined user-scoped database access policies and ownership checks in the production application while keeping the public demo fictional and local.

Pearl Anniversary Celebration | JavaScript, Vercel Functions, Vercel Blob

- Protected shared letter edits with ETag/If-Match checks and private Blob storage; tested stale-write and delete conflicts so outdated changes cannot silently overwrite newer content.

Personal Portfolio | Astro, TypeScript, Netlify, Vercel

- Built an Astro portfolio with one typed project collection reused across listings and dialogs; disabled decorative animation for reduced-motion and Save-Data preferences and regenerated share images during builds.

EDUCATION

Mapua Malayan Digital College
BS Information Technology, specialization in Software Development In progress | Expected graduation 2028

TECHNICAL SKILLS

React, Next.js, TypeScript, JavaScript, HTML/CSS, Astro | PostgreSQL, Drizzle, Supabase, Auth.js, serverless functions | Git, GitHub Actions, Vitest, Netlify, Vercel
